

CHATTANON AMPRASOET

Computer Engineer with experience supporting ERP implementation, business analysis activities, and process improvement initiatives. Experienced in gathering user requirements, analyzing operational issues, and collaborating with development teams to deliver practical digital solutions. Interested in AI, Data, and Digital Transformation.

Education

Bachelor of Engineering (B.Eng.) in
Computer Engineering
Faculty of Engineering, Southeast
Asia University
GPA: 3.35
Second-Class Honors

Certifications

**ITPEC – Information Technology Professional
Examination Council**

Information Technology Passport (IP)
Passed under SIPA supervision | March 8, 2024

Selected Project

Intelligent Parking Management with Artificial Intelligence

Developed an AI-powered parking management system using Computer Vision to automatically detect parking occupancy in real time. Designed and implemented object detection models with TensorFlow SSD MobileNet and OpenCV, integrated AI detection with a mobile-based monitoring dashboard and real-time communication, and evaluated system performance for practical deployment.

Key Responsibilities

○ 2025

AMPOL FOOD PROCESSING LIMITED

Enterprise Resource Planning (ERP) Officer

- Supported ERP system development and enhancement to align with business requirements and improve operational efficiency.
- Gathered and analyzed business requirements, collaborated with internal users, and proposed practical technology solutions.
- Developed automation solutions, including RPA for stock data extraction, to streamline business processes.
- Designed and implemented internal business systems, including IT Asset Management, WMS dashboards, DC Audit monitoring, and workflow automation using n8n.
- Built dashboards and reporting tools to support operational monitoring and business decision-making.
- Participated in process improvement initiatives through data analysis, automation, and digital solution development.

○ Apr 2026 – Aug 2026 (4-Month Contract)

BEDROCK ANALYTICS COMPANY LIMITED

IT Support (Business Operations)

- Analyzed and resolved post-implementation system issues by gathering user feedback, identifying root causes, and recommending practical system improvements.
- Gathered and translated business requirements into actionable enhancement requests, ensuring solutions aligned with user needs and project constraints.
- Collaborated with development teams, business users, and stakeholders to improve system functionality and support successful system implementation.
- Coordinated communication between executives, managers, end users, and developers to ensure clear understanding of business requirements and technical solutions.
- Supported and enhanced multiple municipal information systems, including Utility Billing Systems, Government Service Request Systems, Meter Reading Systems, City Data Platform (CDDP), Incident Management Systems, and Smart Meter solutions.
- Worked closely with public sector users through on-site support, gaining practical experience in analyzing operational challenges and delivering user-focused system improvements.
